SUMMARY

Backend Engineer with 5+ years of experience building production systems with Python/Django and PHP/Symfony on AWS, focused in recent years on Large Language Model (LLM) and Retrieval-Augmented Generation (RAG) systems. Lead developer of Metodbox AI, a multi-agent assistant grounded in about 65,000 videos and 30,000+ books for an education platform with about 600,000 users. Experienced across the full delivery path, from requirements and API design to background job queues, vector search, CI/CD and container deployment. Currently leading the migration of an LLM content-generation service to AWS EKS (Kubernetes) and queued AWS Lambda jobs.

EXPERIENCE

Backend Engineer — BK Mobil
Jun 2023 – Present | Ankara, Turkey

- Led Metodbox AI as lead developer and product owner, from requirements and planning to infrastructure and CI/CD: a multi-role AI assistant using Retrieval-Augmented Generation (RAG) with voice and image input, built with Python, Django, AWS Bedrock, and OpenAI and Anthropic Claude models; mentored junior engineers and reviewed their code.
- Built LangChain and LangGraph multi-agent workflows that let users retrieve curriculum-linked content, generate reports and call platform tools in natural language, with role-specific prompts and guardrails, traced and evaluated with Arize Phoenix.
- Processed and embedded about 65,000 videos (transcribed with Whisper) and 30,000+ books into OpenSearch vector indexes through Celery, Redis and Beanstalkd background pipelines; rebuilt the book-content RAG pipeline and am now bringing the video pipeline to the same standard.
- Designing and building the next version of bkai, an LLM service that generates educational questions and images, with question and image versioning, teacher-written image prompts, direct Amazon S3 uploads and queued AWS Lambda jobs for generation.
- Leading the migration of bkai to AWS EKS (Kubernetes), deployed through Bitbucket Pipelines with AWS Secrets Manager.
- Built the notification system for Metodbox and Uğur Dijital in PHP/Symfony: 60+ instant and scheduled notification types with override logic, queued through Beanstalkd with listener and pub/sub patterns and delivered to web and mobile through Firebase, for a platform of about 600,000 users.
- Integrated Metodbox and Uğur Dijital with 20+ third-party education platforms, including Pickatale and Kodris, using OAuth 2.0, SSO, JWT, signed and timestamped links and deep links, working with each partner from the first meeting to release.
- Built the admin panel backend of Seçenek, a university-exam preparation platform, from scratch in a microservice architecture (authentication, roles and permissions, background bulk user import, purchase and refund reports, curriculum and package management), and maintain Metodbox and Uğur Dijital, including preparation for each academic year.

Backend Developer — QOSHE
Aug 2021 – Jun 2023 | Hybrid

- Built a Twitter API-based streaming system for QOSHE News in Python with MySQL, Redis and MongoDB, designed for fault tolerance and easy maintenance.
- Implemented a logging system that uses parallel programming to monitor and record real-time actions, which made production issues faster to trace and resolve.
- Designed and developed microservices that distribute processing tasks across the system.

Full Stack Developer Intern (long-term) — Innova
Jul 2022 – Jan 2023 | Ankara, Turkey

- Developed full-stack pages of ATS (Alacak Takip Sistemi, today PayFlex), a receivables-tracking product, with Java and Spring Boot on the backend and Vue.js 2 on the frontend.
- Wrote Cucumber test suites for web services and resolved bugs with the test team using Jira and Bitbucket.

Web Developer Intern — Atılım University
May 2021 – Sep 2021 | Ankara, Turkey

- Built the websites for the university's Promotion and Preference Days with PHP, JavaScript and MySQL.

EDUCATION

B.S. in Computer Engineering — Atılım University
Sep 2019 – Jun 2023 | Ankara, Turkey

- GPA: 3.96/4.00; graduated with the third-highest GPA in the university.
- Minor in Mathematics. Language of instruction: English.

SKILLS

Languages: Python, PHP, Java, JavaScript, SQL

Frameworks: Django, Django REST Framework, Celery, Symfony, Doctrine ORM, Spring Boot

AI / LLM: Retrieval-Augmented Generation (RAG), LangChain, LangGraph, multi-agent workflows, prompt engineering, embeddings, vector search, AWS Bedrock, OpenAI API, Whisper, Anthropic Claude, Arize Phoenix

Data stores: MySQL, PostgreSQL, MongoDB, Redis, OpenSearch, Elasticsearch

Cloud & DevOps: AWS (S3, EC2, IAM, Lambda, EKS, Secrets Manager, Bedrock, OpenSearch Serverless), Google Cloud, Firebase, Docker, Kubernetes, Bitbucket Pipelines, CI/CD, Linux, Git

APIs & architecture: REST APIs, OAuth 2.0, SSO, JWT, microservices, Beanstalkd, message queues, pub/sub

LANGUAGES

Turkmen (native), Turkish (fluent), English (fluent)
